Summer Update

Feel connected to the world in a whole new way with Epoq

Oticon has just released a new hearing aid called Epoq. Epoq features include high speed binaural processing and Bluetooth connectivity through the use of a streamer. The advanced technology allows you feel connected to the world in a whole new way.

High speed binaural processing occurs when wearing two Epoq hearing aids. Binaural processing enables the hearing aids to work together via wireless communication so that the sounds coming to the ears are more natural and allow for sound localization. The coordination of the two hearing aids benefits the patient by improving the sound quality and clarity. At the heart of this technology is the fast processing speed and artificial intelligence which allows the two hearing aids to make constant decisions about the environment you are in to preserve the natural sound quality. A pair of Epoq work together to maximize speech understanding and decrease listener fatigue.

The Epoq in conjunction with the optional Streamer work together to connect you to the wireless world. The Streamer is a Bluetooth device that receives signals from other Bluetooth devices, such as, cell phones, Ipods, and MP3 players. The Streamer when worn with a pair of Epoq's allows for binaural (stereo) hearing of music or the phone. Now technology can be connected at the push of a button.

What does all this technology mean to you? It opens up a new world of hearing. From the environment around you, to location of sounds and people, to utilizing cell phones, the Epoq is pushing the boundaries of hearing. For more information, please contact Professional Hearing Services and hear for yourself.

* Introductory Offer *
* Free Streamer with the purchase of a pair of Epoq hearing aids *
* Or *
* \$300 off a pair or \$100 off of one Audeo Offer end 9-30-07 *

of ENT physicians this August**

**Erin Hanson a fourth year doctoral student from
the University of WI—Madison will be completing
her fourth year clinical externship with Profes-
sional Hearing Services.**

Audeo-
Personal Communication Assistant

Phonak is the manufacturer of a new, technologically advanced personal communication assistant. It is sleek, stylish and discreet and yet houses state-of-the-art technology. Audeo was designed for the young and the young at heart, especially for active individuals who encounter various demanding listening situations.

It can be a struggle to keep up with conversations in settings with background noise. Audeo was designed specifically to meet this challenge. The dual microphone array inside the device brings the speech you want to hear into focus while decreasing background noise. The internal digital processor analyzes the sounds around you and adapts to the various environments of your active lifestyle. An open-ear tip provides more natural comfortable sound.

Audeo has no onboard buttons to push or dials to turn. It silently performs millions of calculations per second while you are free to simply enjoy an enhanced, natural listening experience. An optional remote is available for those who would like to have control over the volume and programs.

This tiny, exciting device comes in a range of colors from natural tones to vibrant finishes. Audeo, the personal communication assistant gives a whole new look to better hearing. Call our office for more details at 262-549-5150.
